

LLPG / LSG gazetteer for local authorities

Managing, maintaining
and sharing LLPG / LSG
address data

Leaders and innovators

Aligned Assets is the leading, independent provider of LLPG / LSG gazetteer software solutions helping more than a hundred local authorities consume, share, integrate and match the most up-to-date address data. In recent years, we have pioneered cutting-edge geospatial augmented reality applications developed for public benefit.

Since 1996, our innovative solutions have delivered accuracy and efficiency for our local authority customers, saving them time and money.

Seamless integration

Because our software will integrate with any system being used, our local authority customers can enjoy increased

efficiencies across all council departments. As a result, they are able to drive cost savings by facilitating more efficient planning; increase income remittance and reduce fraud.

Independent, small and agile

We are independent, small and agile, meaning we can quickly

adapt to your requirements, whatever system or supplier you use. We know all our customers well and are highly reputed for our excellent personal service. We also work with various partner organisations to deliver the very best solutions for your purposes.

Flexible solutions

Derived from a number of modules, our flexible solutions can be easily tailored to meet your specific needs.

LLPG / LSG gazetteer for local authorities

Our Local Land and Property (LLPG) and Local Streets gazetteer (LSG) is the most functionally rich and advanced gazetteer available. As a dynamic solution, it is continually enhanced and improved upon, based on the feedback we get from our customers.

Easy to use, our gazetteer enables local authorities to create and maintain the streets

and properties within their area in the British Standard BS7666, and then send that data to the national hub run by GeoPlace,

as well as sharing with other important operational systems within the council such as planning, revenues and benefits.

We have built in numerous features that are designed to maximise productivity, including a wizard to batch create multiple properties. On completion of your batch creation, you can simply drag and drop those properties onto their correct positions on the map. Our

gazetteer will also accommodate large changes or corrections to your LLPG by batch editing multiple properties.

Our LLPG / LSG gazetteer will integrate with any other system being used, resulting in synchronised, accurate address data across the whole council. Using the automated processes reduces the need for manual intervention, and therefore duplication of effort, saving time and money.

In addition to synchronising, matching and sharing accurate data, local authorities can record any location specific information against the BS7666 address, such as risk to staff required by departments doing residential visits.

Address searching

The address search module enables people and other systems to search for addresses held in the main gazetteer, allowing any staff member to find a property held in their own LLPG. Another optional module provides a set of web services that enable a third party system to carry out an address lookup on the LLPG or a national address contained in AddressBase Premium. We even have a module that can allow third party systems to carry out address lookups on our gazetteer without having to integrate with our web services.

Address matching and cleansing

This enables our local authority customers to cleanse and match their address data to that in their LLPG, resulting in a gazetteer of official addresses that comply to the British Standard BS7666, providing

the Unique Property Reference Number (UPRN) and geographic coordinates. This has achieved largescale efficiencies in the provision of council services and accurate billing.

Street naming and numbering

Our street naming and numbering solution helps local authorities meet their legal requirement to allocate names and numbers to streets and properties. This flexible solution enables you to manage the complete lifecycle of this process in a standardised and logical format. Full integration to the LLPG gazetteer ensures maximum efficiency by reducing duplication of effort.

Boosting business address data

Our business names solution delivers the most up-to-date business data available. Compiled by 118 Information, the solution provides monthly updates, and is designed to reflect real life scenarios, ie the name over the door, not the unit number, in addition to a wealth of other business data.

Augmented reality

Our cutting-edge augmented reality application provides real-time data relevant to a user's current location and circumstance, both visually and in augmented reality (AR). Represented as AR markers superimposed over the view seen through the camera on a smartphone, its use creates a vast range of benefits from helping protect staff on solo residential visits to helping visitors navigate a town or festival.

Hosted or in-house solutions

You can either subscribe to our solutions to manage and maintain them in-house yourself, or we can do all of that for you with our hosted solutions.

The key benefit to a hosted solution is that you can be confident you are accessing the correct, most up-to-date address data, without having to invest in expensive maintenance and infrastructure costs.

Full service portfolio

We are there to support our customers with a full range of professional services including:

Professional services consultancy

from helping you identify what's needed to achieve your objectives to getting you set up efficiently.

Training

offered onsite, via webinars or conference calls.

Support team

delivering fast, high quality support for all your queries.

Customer portal

access discussions or product update information, or post questions for our team or other members of the Aligned Assets community.

Annual customer user group events

allowing you to network with industry colleagues, while keeping abreast of developments from Aligned Assets and our partners.

Drop us a line to see how we can help you manage, maintain and share accurate address data across your council:
